EASTLAKE PAINT

(Sensitive content removed)

Made in Four Colors

RED, BROWN, BLACK and GRAPHITE

(Slate Color)

Guaranteed from Three to Five Years . . .

Especially prepared for Metal Shingles, Tin and Iron Roofs, Bridges, Iron Fences, Smoke Stacks, etc. Put up in One Gallon Cans and Barrels. *It Costs Less than Other Paints and Wears Longer.*

Eastlake Paint is not a new and untried article. Our guarantee is based on actual trial, and we therefore have no hesitancy in making it.

What it Contains. It contains nothing but the highest grades of oxides as pigments, and is carefully and scientifically made. It contains no acids or chemicals which are injurious to tin or metal, and does not affect the water for drinking purposes.

Covering Qualities. A gallon will cover about 400 square feet. One coat of Eastlake Paint will cover as well as two or three of any other. It makes a perfect covering, thereby preventing *Rusting and Rotting*.

Adhering Qualities. Will not wash off if rain comes one hour after applying. Will adhere to greasy as well as dry roofing plate, and new as well as old roofs. Will not *Blister, Crack or Granulate*, as other paints are liable to do.

Stops Leaks if not more than one-eighth inch in size. It hardens perfectly all through if put on thick or thin, thereby forming a perfect cement, at the same time retaining elasticity enough to expand with the metal.

Acid and Alkali Proof. It is therefore the best paint for use in the vicinity of *factories* where *acids* are used, and for use at the *sea-shore* where roofs are affected by the *salt-air*.

For Tar Paper Roofs it is the only paint that is fit for use as it is not affected by the heat and is an absolute protection against dampness. It thus prevents the weather from getting to the paper, which is the chief cause of the destruction of tar paper roofs. Tar paper dealers usually recommend the use of coal tar, which in a short time cracks and runs off in rivulets.

For Damp Walls it is unexcelled. Two coats will render a damp wall perfectly dry. Moisture cannot get through Eastlake Paint.

For Fences and Farm Buildings it gives better service than the much more expensive paints. Its ingredients are great preservatives of wood. Both the red and brown are good colors for this purpose. They give a rich velvety appearance. For wood work a more liberal use of linseed oil should be made as a thinner than for metal.

It Can be Used in the hottest weather as well as at any other time. It will harden under the hottest sun.

The Brown and Graphite are recommended as the best for roofs and iron work, as the pigments used in their manufacture contain a larger percentage of iron (oxide and carbon) than any other paint on the market.

To Get the Best Results in painting old roofs, the following points should be observed: Clean the surface, scraping off all cracked and loose paint; use a good brush, rubbing out the paint well, being careful that the surface is well covered.

USE OUR GRAPHITE PAINT if you desire your Metal Shingle roof to have the appearance of Slate.

Stir well before using.
